

SRINIVASA RAO TALARI

Python / Full Stack Developer | Supply Chain Technology | AI & ML

+91-8341492762 | srininvast20@gmail.com | [LinkedIn](#) | [GitHub](#) | Vijayawada, India

PROFESSIONAL SUMMARY

Python full-stack developer and AI/Data Science student (GPA 8.73/10) with demonstrated impact delivering full-stack web applications, REST API development, and ML-driven solutions. Led a ₹3 Lakh government-funded IoT project and built a fraud-detection model, reducing projected financial losses by 30%. Equipped with hands-on knowledge of REST APIs, Django/Flask, React, PostgreSQL, and foundational LLM/RAG concepts — directly aligned with NTT Data's supply chain technology stack. Driven by a consulting mindset: decompose complex problems fast, build reliable solutions, communicate clearly across technical and business audiences.

EXPERIENCE

Python Full Stack Developer — Intern

Jun 2025 – Sep 2025

Council for Skills and Competencies (CSC India)

Hybrid

- Delivered end-to-end feature development across Django and Flask web applications, reducing average bug-to-resolution time through structured defect tracking and root-cause analysis.
- Designed and validated RESTful APIs with JSON payloads for backend services, achieving consistent data integrity across 3+ integrated modules.
- Executed functional test case suites during sprint cycles — covering 100% of critical user flows — and documented all defects in the issue tracker for traceability.
- Collaborated in Agile ceremonies (stand-ups, sprint reviews) using Git branching strategies and pull-request workflows, ensuring zero merge conflicts across a 4-person team.
- Proactively diagnosed performance bottlenecks in legacy code, applying targeted fixes that improved response times in key endpoints.

KEY PROJECTS

Smart Safety Helmet System for Coal Mine Workers

Aug 2024

Team Lead | IoT · LoRa · Embedded Sensors · Cloud Logging

- Secured ₹3,00,000 in R&D funding (VIKAS-24 Innovation Summit) — selected from competitive field of institutional proposals.
- Architected full IoT pipeline: gas sensors (MQ-4, MQ-135) → LoRa communication → cloud logging → real-time hazard alerts, reducing detection latency to under 5 seconds.
- Designed system architecture and led a 3-member hardware-software team; delivered functional prototype within 4-month timeline.
- Earned 1st Place at Innovation Day, Velagapudi Ramakrishna Siddhartha Engineering College and Appreciation Award at VIKAS-24.

Hybrid ML-Based Health Insurance Fraud Detection

Jan 2025

Team Lead | Python · XGBoost · SVM · Dashboard Development

- Built a hybrid ML pipeline combining XGBoost and SVM to classify insurance fraud claims, achieving ~30% projected reduction in false-negative financial exposure.
- Developed a real-time dashboard for claim verification and fraud probability visualization, enabling faster adjudicator decisions.
- Engineered feature engineering pipeline and cross-validation framework, ensuring model reliability on imbalanced datasets.

TECHNICAL SKILLS

Languages

Python (Primary), JavaScript, TypeScript, SQL, C; Java fundamentals

Web / Frameworks

Django, Flask, React, Node.js, Next.js, HTML5, CSS3, REST API design

Supply Chain Fit	ERP awareness; system integration; data pipeline design for operational analytics
AI / ML	XGBoost, SVM, scikit-learn; LLM application development; Embeddings & Vector Search; RAG (foundational)
Databases	PostgreSQL, MySQL, MongoDB
DevOps / Tools	Git, GitHub (branching, PRs, CI basics); Agile/Scrum; defect tracking
Cloud / Certs	Google Cloud (Associate CE), AWS Cloud, ServiceNow, Linux, MongoDB Atlas, Production ML Systems

EDUCATION

B.Tech — Artificial Intelligence & Data Science	2023 – Present
Velagapudi Ramakrishna Siddhartha Engineering College, Vijayawada	GPA: 8.73 / 10
Diploma — Computer Engineering	2020 – 2023
AANM & VVRSR Polytechnic College	89.17%

AWARDS & RECOGNITION

- ₹3 Lakh R&D Grant — Smart Helmet Project (VIKAS-24 Innovation Acquisition Summit)
- Appreciation Award — VIKAS-24 Innovation Acquisition Summit
- 1st Place — Innovation Day, Velagapudi Ramakrishna Siddhartha Engineering College

WHY NTT DATA SUPPLY CHAIN PRACTICE

NTT Data's supply chain consulting practice sits at the intersection of deep domain expertise and modern software engineering — precisely the combination I'm building. I bring a proven ability to own technical deliverables end-to-end (from design to QA), adapt across Python, JavaScript, and REST ecosystems, and apply ML-driven thinking to real operational problems. I am actively deepening my understanding of supply chain planning, inventory management, and ERP platforms, and I welcome client-facing challenges that require translating complex technical solutions into business outcomes.
