PROFESSIONAL SUMMARY

Backend-focused AI & Data Science undergraduate (GPA: 8.73/10) who ships real systems, not toy projects. Built production-grade REST APIs, automated data pipelines, and ML-powered dashboards in Python — all owned end-to-end. Comfortable with ambiguity, debugging under pressure, scraping dynamic web systems, and iterating fast. Secured ₹3 Lakh government R&D funding as team lead and reduced financial losses by ~30% through an ML fraud detection backend. Looking to bring backend engineering depth, ownership, and builder instincts to a high-accountability startup environment.

CORE COMPETENCIES

Backend Development • Python (Django, Flask) • REST API Design & Debugging • Web Scraping & Automation • Data Pipelines • Reverse Engineering (Basic) • PostgreSQL / MongoDB / MySQL • Docker (Basic) • AWS / GCP • Debugging & Root Cause Analysis • Git / GitHub • JavaScript / Node.js • Agile / SDLC • DSA • System Reliability • Clean & Testable Code • Independent Problem Solving

EXPERIENCE

Python Backend Developer Intern | Council for Skills & Competencies (CSC India)

Jun–Sep 2025

- Owned 3 backend modules end-to-end across Django and Flask — from problem statement to deployment — with zero rollbacks in production across the 4-month engagement
- Engineered 15+ RESTful API endpoints with full schema validation and edge-case handling; cleared 100% of QA sign-off with zero data integrity failures — shipped clean, testable, maintainable code from day one
- Built automated data reconciliation pipeline that eliminated ~40% of manual cross-checks; debugged 3 critical production performance regressions independently without escalation
- Used Git branching strategy across 4-member Agile team; resolved all merge conflicts, maintained clean PR history, and delivered sprint commitments on time across every cycle

PROJECTS — BUILT & OWNED END-TO-END

Web Data Automation & Scraping Pipeline *Python, Requests, BeautifulSoup, Selenium, REST APIs | 2024–25*

- Designed and built a multi-source web automation pipeline to extract, clean, and structure public data from dynamic websites — handled pagination, JS-rendered content, and anti-bot headers
- Engineered retry logic, error handling, and structured logging for production reliability; pipeline ran 200+ unattended cycles with <1% failure rate and automatic recovery on timeout
- Reverse-engineered 2 undocumented REST APIs from network traffic to extract structured data without official SDK — documented findings and built a reusable Python wrapper

ML-Based Financial Fraud Detection Backend *Python, XGBoost, SVM, Flask, PostgreSQL, Dashboard | Jan 2025*

- Led team of 3 to build and ship a hybrid XGBoost + SVM fraud detection backend — end-to-end from data ingestion to prediction API to real-time dashboard; reduced projected financial losses by ~30%
- Designed REST API layer over the ML model with <200ms P95 response time; implemented structured logging and failure recovery so the system handled edge cases without crashes
- Debugged 5 model performance regressions during testing by tracing data pipeline issues — identified feature leakage and fixed preprocessing logic before production deployment

IoT Real-Time Data Pipeline — Smart Safety Helmet *Python, LoRa, Cloud Logging, Sensors, Embedded C | Aug 2024*

- Architected end-to-end IoT data pipeline as team lead: sensor firmware → LoRa transmission → cloud ingestion → real-time alert system; achieved <2s latency under continuous multi-sensor load
- Secured ₹3,00,000 government R&D grant; delivered regulatory-grade technical documentation reviewed by an industry panel — won Appreciation Award at VIKAS-24 & 1st Place at VR Siddhartha Innovation Day

EDUCATION

B.Tech — Artificial Intelligence & Data Science | GPA: 8.73/10

2023 – Present

Velagapudi Ramakrishna Siddhartha Engineering College, Vijayawada

Diploma — Computer Engineering | 89.17%

2020 – 2023

AANM & VVRSR Polytechnic College

TECHNICAL SKILLS & CERTIFICATIONS

- Backend & Systems: Python (Django, Flask), Node.js, REST API design, data pipelines, web scraping & automation, Selenium, PostgreSQL, MongoDB, MySQL, Docker (basic), AWS, GCP

- Debugging & Reliability: root cause analysis, structured logging, failure recovery, edge case handling, performance regression debugging, clean & testable code
- Languages & Tools: Python, JavaScript, TypeScript, Java (basics), C, Git/GitHub, Agile/Scrum, Linux
- Certifications: Google Cloud ACE • AWS Cloud • ServiceNow • MongoDB • Production ML Systems • Linux
